

## **Improve:**

Now, more than ever, continuous improvement is at the core of innovation.

A small improvement in efficiency and/or productivity can influence your business profitability and sustainability.

Efficiencies can occur across a variety of ways, eg: improved quality, improved velocity and productivity, minimised downtime, reduced waste, reduced operating lead-times, improved delivery lead-times.

For any initiative to be sustainable, a culture of continuous improvement needs to be adopted across the organisation at all levels. From top-level management down to the team member on the workshop floor. It applies beyond the workshop floor and into other departments like sales, marketing, procurement, customer service, ..

With this collective approach and mindset across the organisation, you will be constantly searching for opportunities and collectively reduce cost (waste), improve service and increase profitability.

Do you want to achieve sustainable long-term business improvements and growth?, then it is critical that a continuous improvement program needs to be continually monitored and adjusted to ensure currency and become part of the every-day process of the organisations' core business.

Impiva Business Solutions has the knowledge and expertise to help you identify key areas of focus and build a road-map 'fit for purpose' which will achieve operational efficiencies and sustainable growth.

We can help you better understand your opportunity.
